CLAIMS

What is claimed is:

1.   A Chinese input method for providing an auxiliary writing model to speed up Chinese inputting;the method comprising:

5   activating a word processing software to open a file editing block;

activating an input method interface through the file editing block;

selecting a writing model active button to execute a writing model menu module; and

the writing model content database returning the corresponding writing model content

to the file editing block.

10   2.   The Chinese input method for providing an auxiliary writing model of claim 1 wherein the word processing software is a word processing application software executable on a hardware platform of a computer.

3.   The Chinese input method for providing an auxiliary writing model of claim 2 wherein the hardware platform of the computer can be a personal computer (PC), a note book

15   (NB), or a personal digital assistant (PDA).

4.   The Chinese input method for providing an auxiliary writing model of claim 1 wherein the operation of activating the input method interface is performed through a predetermined hot key.

5.   The Chinese input method for providing an auxiliary writing model of claim 2

20   wherein the key combination of the hot key comprises number keys 0~9, letter keys A~Z, function keys F1~F12, and special keys ESC, TAB, PgUp, END.

6.   The Chinese input method for providing an auxiliary writing model of claim 1

wherein the method of executing the writing model menu module comprises:

generating a writing model item menu list;

determining whether to increase a customized model item or not;

a user choosing a required writing model item; and

5   searching corresponding contents through the writing model content database.

7.   The Chinese input method for providing an auxiliary writing model of claim 6 wherein the customized model item comprises:

selecting a file of increased customized model contents; and

adding the increased customized model contents into a writing model content database.

10   8.   The Chinese input method for providing an auxiliary writing model of claim 7 wherein the file of increased customized model contents is a text-only file.

9.   The Chinese input method for providing an auxiliary writing model of claim 6 wherein the writing model item menu list is presented with a popup window way by selecting a writing model active button.

15   10. The Chinese input method for providing an auxiliary writing model of claim 6 wherein the writing model active button is on the input method interface.

11. The Chinese input method for providing an auxiliary writing model of claim 6 wherein the writing model item menu list comprises a plurality of writing model items and a confirmation button.

20   12. The Chinese input method for providing an auxiliary writing model of claim 6 wherein the required writing model item generates a signal of selecting writing model items through an operation of selecting the confirmation button.

13. The Chinese input method for providing an auxiliary writing model of claim 12 wherein the operation of selecting the confirmation button is performed through a basic input device.

14. The Chinese input method for providing an auxiliary writing model of claim 13 wherein the basic input device can be a keyboard, a mouse, a digital touch panel, or a voice identification system.

15. The Chinese input method for providing an auxiliary writing model of claim 6 wherein the writing model content database comprises a writing model corresponding table.

16. The Chinese input method for providing an auxiliary writing model of claim 6 wherein the writing model corresponding table comprises a plurality of twin corresponding writing model item names and corresponding writing model contents.
